Course Wrap-Up: Foundations of Cybersecurity

🎉 Certificate of Completion Earned 🎉

Name: Siddharth Dubey

Date: October 26, 2026

Course: Foundations of Cybersecurity

Issuer: Google via Coursera

Course 1 Retrospective

This concludes the foundational module of the Google Cybersecurity Professional Certificate. By completing this course, a solid baseline of cybersecurity knowledge has been established, laying the groundwork for the deeper technical concepts in the upcoming courses.

Core Competencies Mastered

- **Security Frameworks & Ethics:** Mastered the CIA Triad, the eight CISSP Security Domains, and the NIST Cybersecurity Framework. Explored the legal and ethical responsibilities of handling PII and SPII.
- **The Threat Landscape:** Identified key threat actors (APTs, hacktivists, insider threats) and the evolution of common attack vectors, including social engineering, malware, and supply-chain attacks.
- **The Analyst Toolkit:** Gained familiarity with core operational tools such as SIEM platforms (Splunk, Chronicle), network protocol analyzers (packet sniffers), and the vital role of incident response playbooks in preserving digital evidence.
- **Technical Foundation:** Recognized the necessity of programming and OS navigation, including the Linux CLI, SQL database queries, and Python for automating defensive security tasks.

Ready for Course 2: Play It Safe: Manage Security Risks!
